

HORSE FENCE - SQUARE KNOT

Tree Island Steel's horse fencing is very strong and easy to use. The 4"x2" non-climb wire pattern prevents horses' hooves from stepping through the fence.

The special knots that hold the wires together are smooth and will not cut the animals if they rub against the fence. Tree Island Steel's horse fence will keep the horses in the paddock and other animals out.

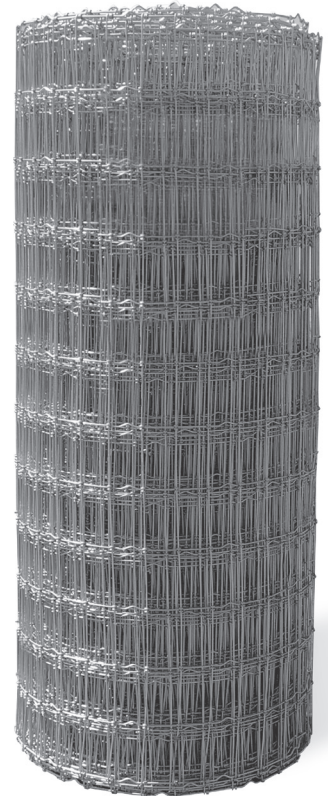

The Class 1 zinc coating and the square knots holding the wire together combine for great longevity and ease of installation over uneven land. Available in several different heights.
